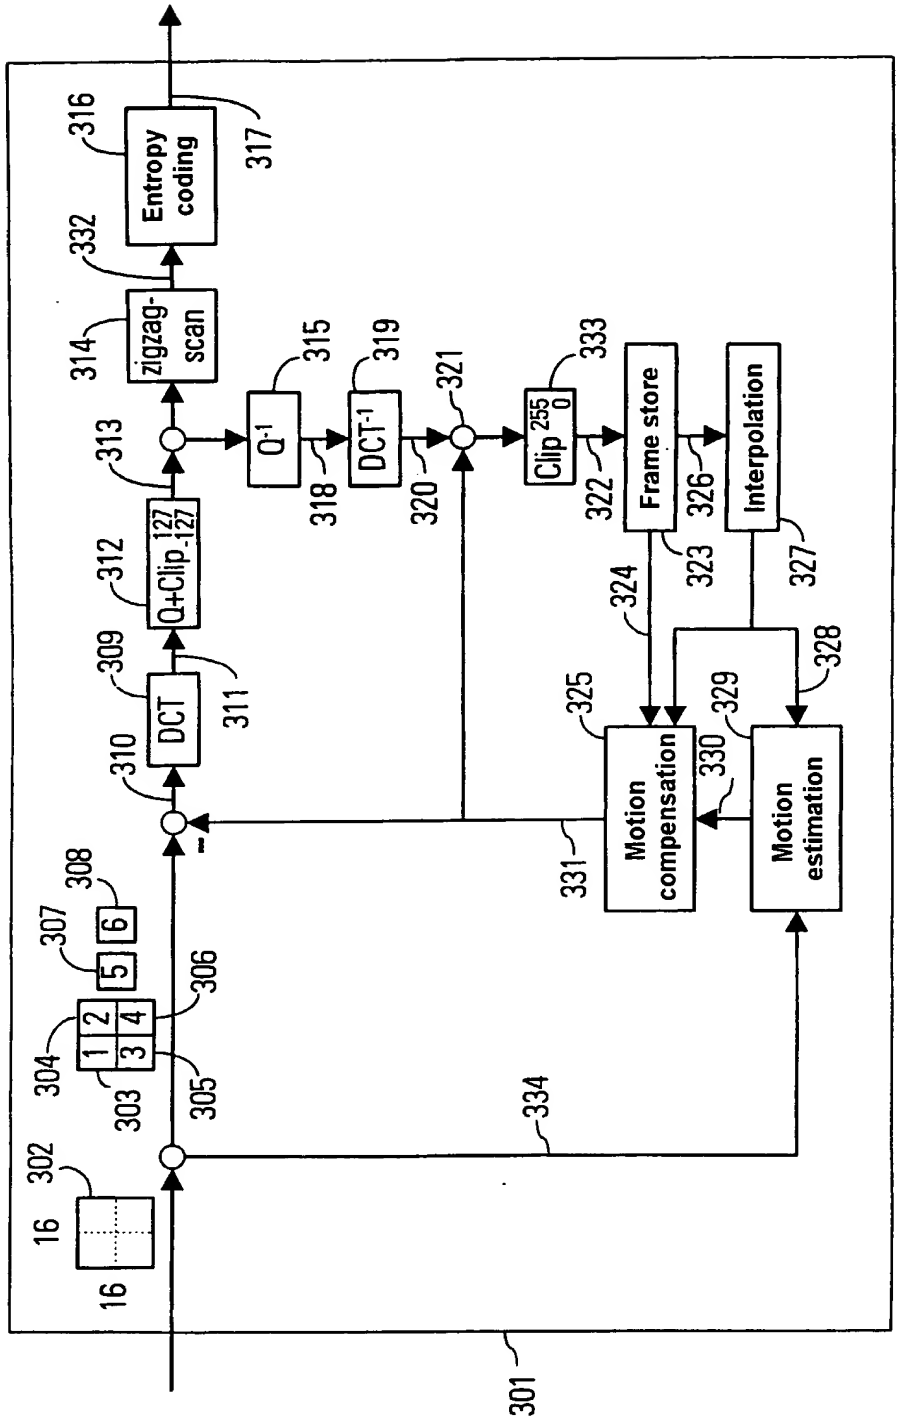

FIG 3

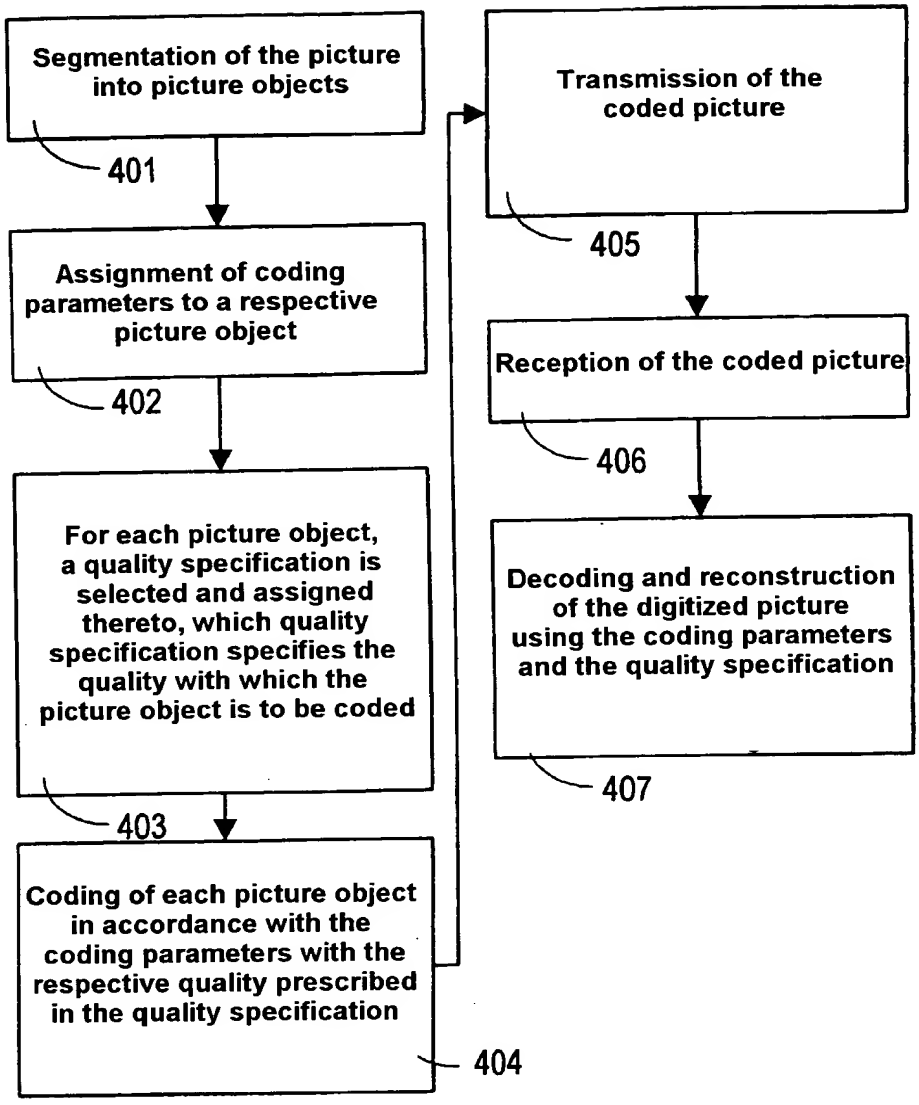
FIG 4



Segmentation of the picture into picture objects
401
Assignment of coding parameters to a respective picture object
402
For each picture object, a quality specification is selected and assigned thereto, which quality specification specifies the quality with which the picture object is to be coded
403
Coding of each picture object in accordance with the coding parameters with the respective quality prescribed in the quality specification
404
Transmission of the coded picture
405
Reception of the coded picture
406
Decoding and reconstruction of the digitized picture using the coding parameters and the quality specification
407
